

sidekick™

the USB 2.0 adapter
that bends and rotates

KEY FEATURES

- Connects USB devices in smaller, tough to fit spaces
- 180° rotation left to right, 180° sweep up and down
- Enables you to position an attached device at nearly any angle
- Reduces clutter—no cable to tuck out of the way
- Perfect for iPod® shuffle, flash drives, card readers, and more!
- Works with any USB device in any computer's USB port

Flexible Enough to Meet Your Demands

Have you ever tried to plug in a new gadget to a USB port only to find it won't fit because it's too big, or because your computer's USB ports are too close to each other? Don't create clutter with a cable—simplify with a Sidekick! Sonnet's Sidekick is the double-jointed USB 2.0 adapter that bends over backwards and sideways to connect flash drives, card readers and other small, direct-connect USB 1.1/2.0 devices in small spaces. It's short and narrow, so it plugs into recessed or closely spaced USB ports with ease, and its extreme flexibility enables you to position an attached device in nearly any orientation.

Sidekick makes a great companion for iPod shuffle—you can even connect one to any USB port on a variety of computers and displays that normally present challenging or impossible fits (including iMac® G3, eMac®, some iBook® models, Apple Studio Display) without an extension cable or dock. Got a laptop? Sidekick is a handy travel tool for laptop users with a USB device to connect and tight quarters to work in. At home or away, when space is limited and you need to get connected, ditch the cable and get yourself a Sidekick instead!

Part No: UAD-SDK
