Sonnet Technologies Announces iFreq FM Transmitter, An Elegant, In-Vehicle Solution for the iPod nano

iFreq features innovative design; same great sound quality as the classic PodFreq

(MacExpo, Booth #340 - Köln, Germany – June 8, 2006) - Sonnet Technologies, a worldwide leader in upgrades for Apple Macintosh® computers and iPod® digital music players, today announces the iFreq™ in-vehicle FM transmitter and charger solution that enables wireless sharing of iPod tunes, audiobooks, and podcasts in the car.

iFreq showcases a new and convenient mounting design for the iPod nano. The iFreq cradle for iPod nano snaps off and on an adhesive-backed magnetic disk attached to the dash, enabling the user to snap off the cradle to conveniently control the iPod, and snap it on for easy access and viewing. It's a simple and elegant solution.

Like Sonnet's award-winning PodFreq, iFreq offers superior sound and ease-of-use. It employs the iPod line out signal to obtain a clean, consistent sound level, and uses quality components to provide a high signal-to-noise ratio, excellent stereo separation, and extended frequency response. iFreq delivers a superb listening experience. Simple controls and a large, backlit display are integrated into iFreq's body, which plugs directly into a car lighter jack. This design makes it an easy task to tune both iFreq and the vehicle's radio to the same frequency, and play the iPod music library over the vehicle's sound system.

While iFreq is a complete in-vehicle FM transmitter, charger, and mounting solution for iPod nano, it is also compatible with all iPod models with dock connector when used without the nano mounting cradle. The product will be shipping in third quarter 2006 with a suggested retail price of \$79.95. For more information about any of Sonnet's products, please visit <http://www.sonnettech.com>.
